FLOS

F1142033.A Anthracite

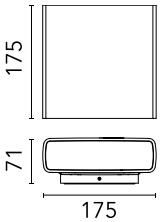

Climber Down - 175 Non Dimmable Anthracite

Designed by Piero Lissoni

781lm - Beam° 14

Integrated 110/240V power supply. Supplied with an 80 mm lenght outgoing neoprene cable. Upwards, single emission version, available upon request.

Are you a professional and your project needs consulting and support?

Main specifications

EAN	8054793569123
Lumen Output (lm)	781

Physical

Colour	Anthracite
Orientation	Fixed
Net weight (kg)	2.16
Package height (mm)	135
Package width (mm)	231
Package length (mm)	235
Package volume (m3)	0.01
IP internal	65

In our constantly evolving world and business, technical upgrades happen every day. This means all product specifications and data are subject to change without warning in order t improve reliability, function, performance or otherwise. We make every effort to ensure the accuracy of our product images, however due to different lighting and screens used for viewing, the colours may vary. Images are indicative of the quality and style of the product but may not represent the precise details of the product you receive. This is because we are constantly working to make improvements. For aesthetic reasons, cables and/or electrical elements are often not shown. Refer to technical data sheets for all technical data. Images and colours are not part of any contract or warranty in any way.

Schematic light drawing

Luminous flux luminaire
781 lm

Beam Angle: 14°

h(m)	E(lx)	D(m)
1	6988	0.28
2	1747	0.55
3	776	0.83
4	437	1.10
5	280	1.38

Photometric

Beam angle C0-180 (°)	14
Beam angle C90-270 (°)	14
Extreme cut off	No

Electrical

Emergency	No

Notes

We recommend using a connection system with a degree of protection greater than or equal to the degree of protection of the luminaire.
During the installation and the maintenance of the fixtures it is important to be careful and avoid damages on the paint coating.
Damages on the coating exposed to outdoor conditions or water, could cause corrosion.
Chemical substances affect the anticorrosion covering protection.
For LED fixtures, there is evidence that most of the damages are connected to electrical effects related to the insulations, which cause destructive electrical discharges
These effects are frequently caused by:
• over voltage coming from the mains' network where fixture is connected.
• electrostatic discharge (ESD) coming from the environment.
The use of a protective device against the overvoltage on the electrical installation is warmly suggest this helps to reduce the intensity of some of these phenomenon and prevent irreversible damages. The selection of the type of device to be used must be adjust on the electrical plant.
2200K available on request.
